Subject index of Volume 99*

Control theory

The characteristic streamline diffusion method for the time-dependent incompressible Navier–Stokes equations, P. Hansbo (2–3) 171–186

Elasticity

Algorithms for static and dynamic multiplicative plasticity that preserve the classical return mapping schemes of the infinitesimal theory, J.C. Simo (1) 61–112
Numerical solution of an optimal shape design problem with elastic solids, A.E. Alvarez Vigil, C. González Nicieza and J.B. Ordieres Meré (2–3) 147–170
A domain-decomposed solver for nonlinear elasticity, Y.-H. De Roeck, P. Le Tallec and M. Vidrascu (2–3) 187–207

Finite difference methods

Computational methods in Lagrangian and Eulerian hydrocodes, D.J. Benson (2–3) 235–394

Finite element and matrix methods

Efficient hybrid/mixed elements using admissible matrix formulation, K.Y. Sze and C.L. Chow (1) 1– 26
A new mixed preconditioning method for finite element computations, T.E. Tezduyar, M. Behr, S.K. Aliabadi, S. Mittal and S.E. Ray (1) 27– 42
A mathematical model of coupled plates and its finite element method, W. Lie-heng (1) 43– 59
Algorithms for static and dynamic multiplicative plasticity that preserve the classical return mapping schemes of the infinitesimal theory, J.C. Simo (1) 61–112
A data parallel finite element method for computational fluid dynamics on the Connection Machine system, Z. Johan, T.J.R. Hughes, K.K. Mathur and S.L. Johnsson (1) 113–134
The characteristic streamline diffusion method for the time-dependent incompressible Navier–Stokes equations, P. Hansbo (2–3) 171–186

* The issue number is given in front of the page numbers.

Stabilized finite element methods: II. The incompressible Navier–Stokes equations, L.P. Franca and S.L. Frey (2–3) 209–233
Computational methods in Lagrangian and Eulerian hydrocodes, D.J. Benson (2–3) 235–394
Fractal interfaces with unilateral contact and friction conditions, P.D. Panagiotopoulos, E.S. Mistakidis and O.K. Panagouli (2–3) 395–412

Fluid mechanics

A new mixed preconditioning method for finite element computations, T.E. Tezduyar, M. Behr, S.K. Aliabadi, S. Mittal and S.E. Ray (1) 27– 42
A data parallel finite element method for computational fluid dynamics on the Connection Machine system, Z. Johan, T.J.R. Hughes, K.K. Mathur and S.L. Johnsson (1) 113–134
The characteristic streamline diffusion method for the time-dependent incompressible Navier–Stokes equations, P. Hansbo (2–3) 171–186
Stabilized finite element methods: II. The incompressible Navier–Stokes equations, L.P. Franca and S.L. Frey (2–3) 209–233

General Rayleigh–Ritz and Galerkin techniques

The characteristic streamline diffusion method for the time-dependent incompressible Navier–Stokes equations, P. Hansbo (2–3) 171–186
Stabilized finite element methods: II. The incompressible Navier–Stokes equations, L.P. Franca and S.L. Frey (2–3) 209–233

Incompressible and near incompressible media

The characteristic streamline diffusion method for the time-dependent incompressible Navier–Stokes equations, P. Hansbo (2–3) 171–186
Stabilized finite element methods: II. The incompressible Navier–Stokes equations, L.P. Franca and S.L. Frey (2–3) 209–233

Material physics

Fractal interfaces with unilateral contact and friction conditions, P.D. Panagiotopoulos, E.S. Mistakidis and O.K. Panagouli (2–3) 395–412

Modern computer architecture

A data parallel finite element method for computational fluid dynamics on the Connection Machine system, Z. Johan, T.J.R. Hughes, K.K. Mathur and S.L. Johnsson (1) 113–134

Nonlinear mechanics

A domain-decomposed solver for nonlinear elasticity, Y.-H. De Roeck, P. Le Tallec and M. Vidrascu (2–3) 187–207
Computational methods in Lagrangian and Eulerian hydrocodes, D.J. Benson (2–3) 235–394

Numerical solution procedures

A new mixed preconditioning method for finite element computations, T.E. Tezduyar, M. Behr, S.K. Aliabadi, S. Mittal and S.E. Ray (1) 27– 42
A mathematical model of coupled plates and its finite element method, W. Lie-heng (1) 43– 59
A domain-decomposed solver for nonlinear elasticity, Y.-H. De Roeck, P. Le Tallec and M. Vidrascu (2–3) 187–207
Computational methods in Lagrangian and Eulerian hydrocodes, D.J. Benson (2–3) 235–394

Optimization

Numerical solution of an optimal shape design problem with elastic solids, A.E. Alvarez Vigil, C. González Nicieza and J.B. Ordieres Meré (2–3) 147–170

Plasticity

Algorithms for static and dynamic multiplicative plasticity that preserve the classical return mapping schemes of the infinitesimal theory, J.C. Simo (1) 61–112
Computational methods in Lagrangian and Eulerian hydrocodes, D.J. Benson (2–3) 235–394

Problems in physics

Computational methods in Lagrangian and Eulerian hydrocodes, D.J. Benson (2–3) 235–394

Shells and plates

A mathematical model of coupled plates and its finite element method, W. Lie-heng (1) 43– 59

Subsonic flow

A data parallel finite element method for computational fluid dynamics on the Connection Machine system, Z. Johan, T.J.R. Hughes, K.K. Mathur and S.L. Johnsson (1) 113–134

Systems of linear and nonlinear simultaneous equations

A new mixed preconditioning method for finite element computations, T.E. Tezduyar, M. Behr, S.K. Aliabadi, S. Mittal and S.E. Ray (1) 27– 42

Thermal effects and thermodynamics

Computational methods in Lagrangian and Eulerian hydrocodes, D.J. Benson (2–3) 235–394

Transonic flow

A data parallel finite element method for computational fluid dynamics on the Connection Machine system, Z. Johan, T.J.R. Hughes, K.K. Mathur and S.L. Johnsson (1) 113–134

Transport phenomena

Computational methods in Lagrangian and Eulerian hydrocodes, D.J. Benson (2–3) 235–394

Viscous flow

The characteristic streamline diffusion method for the time-dependent incompressible Navier–Stokes equations, P. Hansbo (2–3) 171–186

Stabilized finite element methods: II. The incompressible Navier–Stokes equations, L.P. Franca and S.L. Frey (2–3) 209–233
